

Untitled Project

Release Plan

Revision 1

High Level Goals

1. User should be able to create profiles, and post some type of updatable status.
2. Users should be able to access some type of content feed, where statuses from other users can be accessed.
3. Users should be able to rate the quality of the content of others.
4. Users should be able to post pictures and gifs.
5. Users should be able to embed videos and images from third party image hostings sites.
6. User information will be anonymized by default, but provide users the ability to become non anonymous.
7. Users should be able to comment on posts, but only of users they have connected with in some way.
8. Website should be able to scale for a large network of users.

User Stories for Release

Sprints in two week intervals

Sprint 1

1. As a user, I need to be able to sign up and login to view and post content. [3]
2. As a developer, I need a database to track posts and user data. [3]

3. As a user, I need to be able to post to distribute content, which could contain embedded content (image, video). [8]
4. As a user, I need to be able to view the posts of other users. [3]

Sprint 2

1. As a user, I need other user's posts to be compiled in either editorialized or chronological manner. [5]
2. As a user, I need to be able to search for other users, and connect or follow them in some manner. [3]
3. As a user, I need to be able to view content posted by other users, given the user has permission. [5]
4. As a user, I need to be able to comment on the posts of people I have connected with. [8]

Sprint 3

1. As a user, I need to be able to rate content. [3]
2. As a website manager, I need the ratings of content to affect how likely users are to view that content. [13]
3. As a website manager, I need an algorithm to sort through content available to users and provide them with an up to date stream of content. [13]
