

Untitled Project

Release Plan

Revision 2

Purpose

The intent of Untitled Social is to create a balance between the personal and public spheres of social media, implemented through a de-anonymized approach coupled with decentralized control over communities created on the platform. Topics to which people post will be moderated by members of the community, who apply for a moderator position and are voted in by followers of the topic. Votes will be held automatically for moderator positions, and votes can be held by moderators for policy decisions within the topic.

High Level Goals

1. User should be able to create profiles, and post some type of updatable status.
2. Users should be able to access some type of content feed, where statuses from other users can be accessed.
3. Users should be able to rate the quality of the content of others.
4. Users should be able to post pictures and gifs.
5. Users should be able to embed videos and images from third party image hostings sites.
6. Users will be limited to one account representing their identity.
7. Users should be able to comment on posts visible to them..
8. Website should be able to scale for a large network of users.

User Stories for Release

Sprints in two week intervals

Sprint 1

1. As a user, I need to be able to sign up and login to view and post content. [3]
2. As a developer, I need a database to track posts and user data. [3]
3. As a user, I need to be able to post to distribute content, which could contain embedded content (image, video). [8]
4. As a user, I need to be able to view the posts of other users. [3]

Sprint 2

1. As a user, I need to be able to post to topics that I join. [13]
2. As a user, I need to be able to search for and follow other users. [5]
3. As a user, I need to be able to view the content of users I have followed, with a permissions structure. [5]
4. As a user, I need to be able to comment on the posts of people I have connected with. [8]

Sprint 3

1. As a user, I need to be able to rate content. [3]
2. As a website manager, I need the ratings of content to affect how likely users are to view that content. [13]

3. As a website manager, I need an algorithm to sort through content available to users and provide them with an up to date stream of content. [13]
